Containerised Incinerators for BP

Incinco are manufacturing further containerised incinerator units for BP sites in Algeria.

The 12 metre long, hi-cube containers, come fully equipped with chequer-plate flooring, side access and personnel doors, grills, ventilation fans and full internal electrical and safety equipment.

The packaged units are designed for transporting the incinerator to site and to become the on-site incinerator building. Once delivered, the chimney is unpacked and installed, the electrical and diesel supplies are connected and the incinerator is ready for action.

The units are popular for use in remote, inaccessible and extreme locations or where no suitable incinerator building is available.

The incinerators (from 100kg per hour to 150kg per hour) are complete with auto-feeding via pneumatic ram loader and auto-ashing via internal ash grate and ash trolley. They are fully automatic in operation from a plc in the control panel.

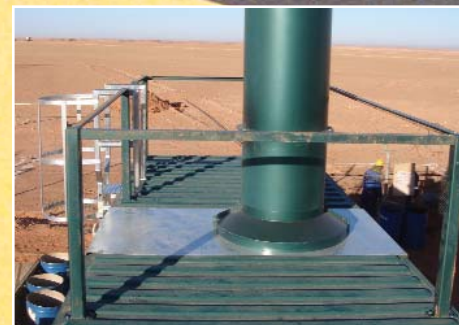

Once on site the units are commissioned by Incinco's team of installation and commissioning engineers who also provide full operator training and maintenance schedule.
