Mongolian Mine

Complete Containerised Waste System

World Leaders in incineration technology...

Oyu Tolgoi Project in Mongolia

Incinco has manufactured a new multi-containerised waste incineration and gas cleaning system for the Oyu Tolgoi Mine Project in Mongolia.

The seven container system comprises a diesel and waste oil fired incinerator - with auto-feeding via bin tippler and pneumatic ram loader with bin handling area - located in 12m and 6m joined containers. These units are linked to the thermal mass rejection plant and flue gas cleaning and monitoring system, and explosion proof

oil and waste oil storage and processing unit. Also included is a full spare parts and distribution container and a system control room and utility block.

The project pre-build was completed and the units shipped at the end of 2011. The system is to be commissioned by Incinco specialist engineers at the Gobi desert gold and copper mine in spring 2012.

Incinco manufacture incinerators and complete waste management systems.

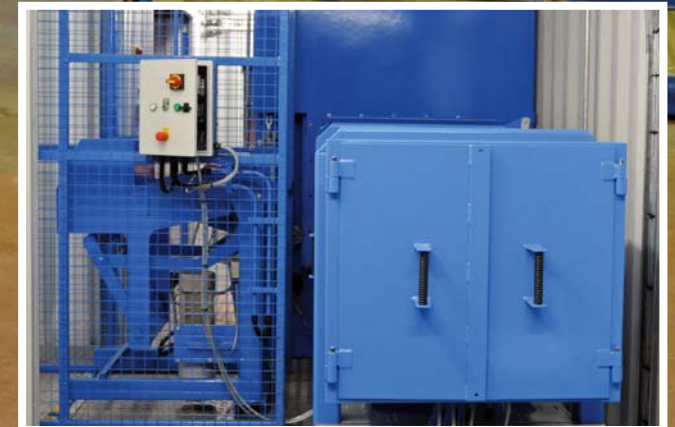

We install and commission the equipment throughout the world providing our international customers with unrivalled waste management solutions and service.

For more information on our wide range of incinerator units and other projects please contact:
