

Containerised Animal Carcass Incinerators

Incinco manufacture and supply a range of containerised animal carcass incinerators specifically designed for fast deployment, often for use in inaccessible locations. These containerised units can be transported safely and easily to virtually any location anywhere in the world and are fully self contained with all the auxiliary equipment within the one unit.

Manufactured to comply with local, EU or worldwide environmental standards, Incinco has over 80 years experience of manufacturing incinerators. Clients include: BP, Shell, Gazprom, Barrick Gold and the British MOD.

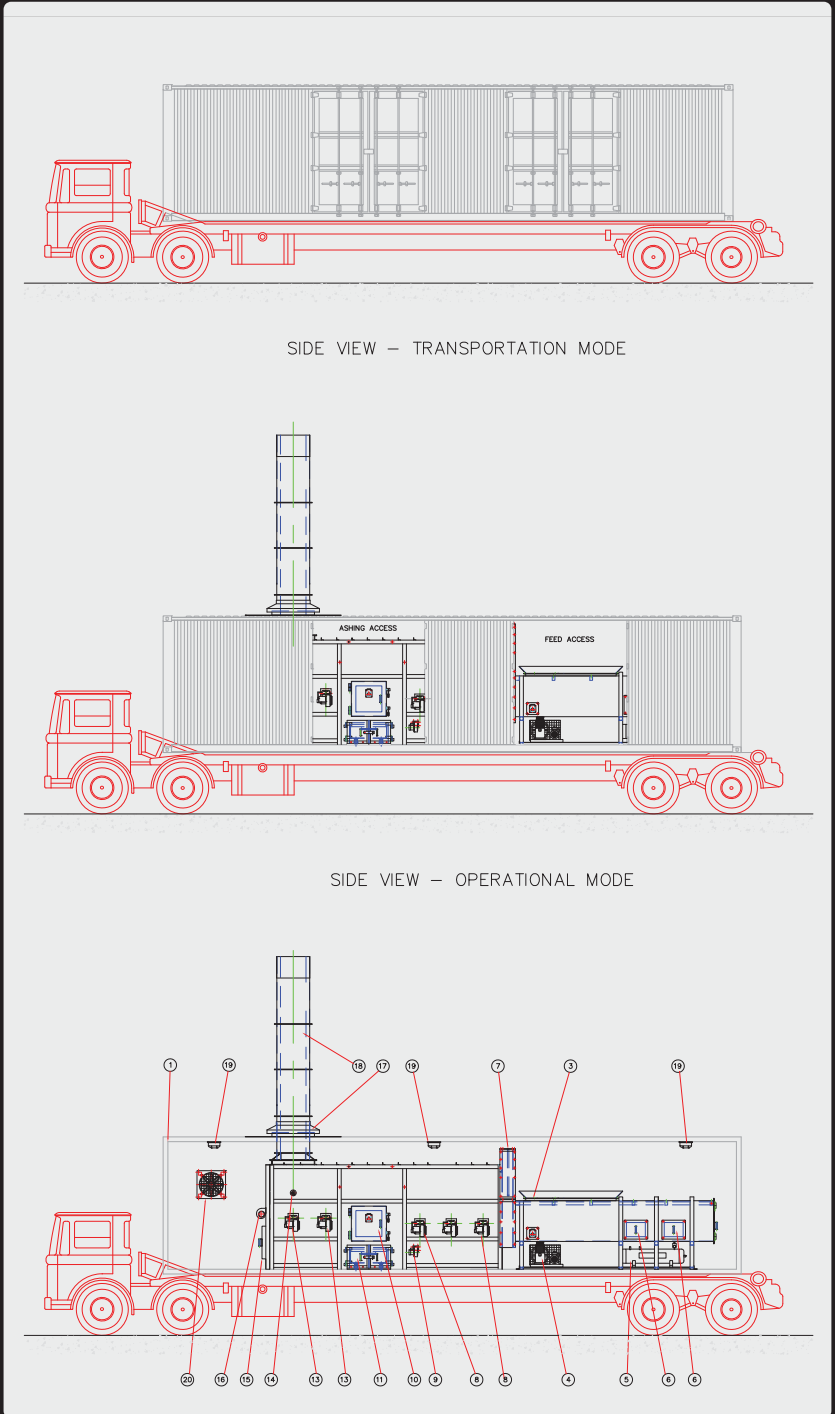

World Leaders in incineration technology...

Why Incinco containerised Incinerators?

Incinco fast-response containerised incinerator units provide complete waste management solutions to remote locations throughout the world.

The incinerator systems provide auto feeding via ram loader and semi auto ashing via cast iron ash grate and ash trolleys. The incinerators range in size from 150kg/hr to 400kg/hr. These units are housed in 12m Hi Cube ISO containers – fully fitted with chequer plate flooring, fluorescent lighting, complete electrics and safety equipment. Weighing approximately 20 tonnes they provide the solution to fast and efficient disposal of all animal carcasses. On delivery to site they can be used either on, or off, the trailer. Once positioned the unit simply needs the refractory lined chimney erected and the oil tank attached.

ITEM No	DESCRIPTION
1	CONTAINER
2	RAM LOADER
3	LOADING DOOR
4	COMPRESSOR
5	RECEIVER
6	RAM LOADER INSPECTION DOOR
